IPMA ITALY NATIONAL CONGRESS

AI in the future of Project Management

The development of **Artificial Intelligence is introducing innovations** in different sectors and types of business, in some cases bringing real transformations.

Always more and more companies are recognizing the benefits and potential of the use of AI **to improve and optimize production efficiency** and achieve greater results. In relation to project management, knowing how to make a good use of this tool can become a **new skill for a Project Manager**.

How will AI change project management? Thanks to AI it will be possible to achieve the project objectives with higher probability of success? During the conference we will answer this and other questions together, we will listen to the testimonies of our Keynote Speakers, we will explore and **analyse the ongoing evolutions** to prepare ourselves for future ones.
